The application has been amended as follows:

In the Specification:

[0001] This application is the US National Stage of International Application No. PCT/EP2004/010349, filed September

15, 2004, and published as WO 2005/037483 Al, and claims benefit

thereof. The International Application claims the benefits of

European Application No. EP 03022634.4, filed October 6, 2003,

both of the  $\underline{se}$  applications are incorporated by reference herein

in their entirety.

Art Unit: 1792

In the Claims:

1-21. (cancelled)

22. (currently amended) A method for producing a layer
system on a component, comprising[[;]]:

providing a substrate that comprises including a recess;

filling the recess with a first material that includes and an agent for reducing the melting point of the first material;

forming a local coating by applying a second, metallic material comprising a metallic material in the region of the filled recess by an intermediate removal heat treatment forming a local coating,;

performing a removal heat treatment during which the second, metallic material reacts with the agent for reducing the melting point of the first material, thereby extracting said agent;

covering the region of the filled recess with a base coating, the base coating comprising [[a]] MCrAlX alloy[[,]];

wherein the agent adversely affects a property of the base coating if the agent diffuses into the base coating thereby making the agent undesirable; and

Art Unit: 1792

wherein during the removal heat treatment the second material reacts with the first material and  $extract[s]\underline{ing}$  the undesirable agent of the first material to inhibits [[a]] diffusion of the undesirable agent into the base coating:

wherein M is an element selected from the group consisting of: iron, cobalt, and nickel; and

wherein X is yttrium or a rare earth element.

- 23. (currently amended) The method as claimed in claim 22, wherein the second, metallic material covers the undesirable agent for reducing the melting point of the first material in the recess and functions as a diffusion barrier.
- 24. (currently amended) The method as claimed in claim 22, wherein, after the removal heat treatment and prior to applying the base coating, the second, metallic material and the extracted agent are [[is]] removed together by grinding with the undesirable extracted agent which has been removed from the first material after the removal heat treatment and prior to the coating of the substrate by a grinding treatment.

Art Unit: 1792

- 25. (currently amended) The method as claimed in claim 22, wherein the first material is a solder which contains the agent for reducing the melting point of the first material.
- 26. (currently amended) The method as claimed in claim 22, wherein the agent for reducing the melting point of the first material is boron or a boron-containing compound.
- 27. (currently amended) The method as claimed in claim 2[[2]]5, wherein further comprising a soldering heat treatment is carried out using to bond the first material solder to the substrate in the recess prior to an application of forming the local coating so that the first material bonds to the substrate in the recess.
- 28. (currently amended) The method as claimed in claim 2[[2]]7, wherein the removal heat treatment is performed either simultaneously with the soldering heat treatment or as a separate diffusion heat treatment or the soldering heat treatment.
- 29. (currently amended) The method as claimed in claim 22, wherein the substrate is an iron-based superalloy, a nickel-

Art Unit: 1792

based superalloy, [[or]] a cobalt-based superalloy, or a
ceramic.

- 30. (cancelled)
- 31. (currently amended) The method as claimed in claim 22, wherein a thickness of the local coating with the second material is thinner than the base coating of the component.
- 32. (cancelled)
- 33. (currently amended) The method as claimed in claim 22, wherein the second, metallic material is chromium.
- 34. (cancelled)
- 35. (currently amended) The method as claimed in claim 22, wherein the second, metallic material is applied [[using]]  $\underline{in}$   $\underline{the \ form \ of}$  a paste, a slurry, or a tape.
- 36. (currently amended) The method as claimed in claim 22, wherein the <u>component substrate</u> is a turbine component of a gas turbine or a steam turbine.

37. (currently amended) The method as claimed in claim 22, wherein the first material is a multi-component material.

38-41. (cancelled)

- 42. (currently amended) The method as claimed in claim 22, wherein the second, metallic material is a chromium-containing compound.
- 43. (currently amended) The method as claimed in claim 22, wherein the second, metallic material is a chromium-containing alloy.
- 2. Claims 22-29, 31, 33, 35-37, 42, and 43, are allowed.
- The following is an examiner's statement of reasons for allowance: The reasons for allowance remain the same as set forth in the prior Office action.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance"
